

Physical security

Description

A lot of efforts are put in place for network security, but what about physical security in your organization? Who can access the computers room? If a fire breaks out, did you put in place some security measures to minimize the impact? This training will help you to understand and put in place the best security measures to protect your physical environment. This training will review the physical perimeter security and internal security of your building.

Objectives

In this training, you will understand and implement the appropriate security measures for physical environmental security. Upon completion of this training you will be able to:

- Define the physical perimeter and internal security
- Identify the security measures to protect physical and environmental security
- Inventory the different physical access points of your installations
- Help you to convince your organization to invest in physical security

Content

The training activity will cover the following elements:

- Physical perimeter security
 - Security measures: fences, access points, detection systems, etc
- Security inside a building
 - Security measures: access doors, control zones, entry points of a building, etc
- Operational safety of installations
 - Server room
 - Power supply
 - Control measures
 - Fire protection

Practical cases will be used to help you to assimilate the different topics presented in this training and to implement those within your organization.

Audience

This training is intended to people that need to implement the physical security or any other person involved in it.

Duration

A half day.

This training can be customized to your organization to give you the best ROI.
