

Security operations

Description

This training will help you to put in place best practices of Information Security and protect your technological infrastructure that support your information assets. Security operations is not limited to install security patches, configure a firewall or use an antivirus to protect your machines. Are you protected for a flood, a fire or a physical intrusion? How do you manipulate the magnetic medias (magnetic tape, USB thumb drive, DVD...)? This training will help you to answer those questions.

Objectives

In this training, you will understand and learn how to deploy security operations in your organization. Upon completion of this training you will be able to:

- Identify the main elements related to security operations
- Establish procedures to reuse medias
- Manage backups
- Prevent breakdowns
- Identify threats and risks related to security operations
- Manage security incidents
- Manage changes
- Set up access controls
- Help you to convince your organization to invest in security operations

Content

The training activity will cover the following topics:

- Operational security
- Protection of assets
- Continuity plan
- Changes management
- Access controls

Practical cases will be used to help you to assimilate the different topics presented in this training and to implement those within your organization.

Audience

This training is intended primarily for someone who need to implement the security operations or anyone else who is involved in.

Duration

A half day.

This training can be customized to your organization to give you the best ROI.
